

We have a Position paper - see table

We support Norway's proposal to work on citizens inclusive working methods, lets start with the governance of this process – include civil society again as observers , as we had in the past

A) New topics

**1) – energy and health** – beyond air pollution, including the fly ash waste, the radioactive pollution – large forest fires Chernobyl – and waste – and water source pollution with chemicals from scale gas hydro fracking.

**2) – Mechanisms for response to early warning, application precautionary principle**

**3) – review how environmental health is addressed in national plans for climate, economic development, trade agreements** – this is key, can destroy all our good intentions – we are seeing this now with the secret negotiations of the Transatlantic Trade Partnership Agreement between EU and USA -

B) Urgent and accelerated action to achieve the Parma time bound targets

**On safe water and sanitation** in schools and other children's settings

**On air pollution**, including from household emissions

**On chemicals**, elimination exposure to hazardous of children in particular early life exposure !

- Neonatal department in all hospitals to be “low PVC” to reduce the current VERY high exposure to well studies hormone disrupting chemicals such as Phthalates and Bisphenol A – including from pesticides – e.g. glyphosate – Roundup – IARC classified as potential human carcinogen – most used pest, in schools, playgrounds, homes – alternatives, e.g. Dutch city of Meppel using sheep to deal with weeds in its parks.

**On effective implementation** of national plans of eliminate asbestos related diseases

- Set up multi sectorial governmental working group -
- public awareness raising campaign, training journalists
- training educate all stakeholders
- register people with asbestos diseases, occupational and environmental exposures,
- subsidy for safe removal and disposal of asbestos waste
